Coin Cabinet: what the six test users said

Six pretend users tried the app (sessions 22, 22b, 22c, 22d). Each wrote an app-store-style review, a list of what worked, what confused them, and a wish list. All of it is in one place. Prepared 5 Nov 2026 for the app owner. Updated from the 3 Nov version.

REVIEW 1 First-time collector	REVIEW 2 Heir	REVIEW 3 Coin-show seller	REVIEW 4 Heir, re-run v0.52	REVIEW 5 Coin-show seller, re-run v0.52	REVIEW 6 Whatnot seller v0.52
★★★★☆ 4 of 5	★★★☆☆ 3 of 5	★★★★☆ 4 of 5	★★★★☆ 4 of 5	★★★★☆ 4 of 5	★★★★☆ 4 of 5

How to read this: green = liked, **red** = confused or broke, blue = wished for. Tests were run by script on a test computer with no internet and a phone-sized screen, so live metal prices, photos, real touch feel, printing and file saving were not fully tested. Reviews 4–6 are on the current app (v0.52.0). Red Book gaps are flagged for you to check against your book; nothing was guessed.

The big picture

Problems that came up more than once

Problem	1	2	3	4	5	6	Status
Coins with no Red Book value (face value or melt used)	●	●	●		●	●	Message added; **gaps still open: check your Red Book**
Silver/gold look worthless until a metal price is typed in	●	●					Fixed (price prompt)
Words a newcomer won't know	●	●					Fixed (plain-words help)
Locked "Fill in from photos" box on every Add coin form	●	●	●				Not raised again in reviews 4–6
Coin ID changed on first reopen			●				Fixed; checked again in 5 and 6
Important fields hidden in folded sections (Source, fees, Date acquired)		●	●		●		Partly fixed; Date acquired still folded
Different "profit" or "sales" numbers on different pages			●			●	**Open (four numbers in review 6)**
Counts and totals that don't match between pages; Business and Personal mixed				●	●	●	**Open**
No way to handle many coins at once (price many, sell several to one buyer)			●		●	●	**Open**
Refund or return erases the sale					●	●	**Open**
CSV has no Business/Personal column (sales CSV lacks buyer, order, tracking)					●	●	**Open**

Box or case demands row and slot numbers			•	•			Case fixed; cardboard box open
Old text in Options says "later" about features that now exist					•	•	**Open (tiny)**

> **No crashes and no script errors in any of the six runs.** The one real bug (changing coin ID, review 3) is fixed and stayed fixed.

Effort per item (taps and entries counted by the testers)

Add a plain coin (Rev. 1)	~7	Add a Business raw coin, all sections opened (Rev. 6)	11–12
Add an inherited coin (Rev. 2)	~8	Add a slab (Rev. 6)	14–15
Add a coin for sale (Rev. 3)	~13	Album spot (Rev. 5)	5
Sell a coin at a show (Rev. 3, 5)	4 (7 with card fee and tax)	Sell on a Whatnot live, with shipping, buyer, order, tracking (Rev. 6)	9
Price a 12-coin case (Rev. 5)	2 taps + 5 singles	Set up a Whatnot show (Rev. 6)	8

What everyone liked

- Adding by typing the coin name: search, pick, year, mint mark, grade. The mint list only shows mints that really struck that coin.
- Empty pages say what to do next. Coin IDs, Red Book value on the coin page, Hide values, backup reminder.
- Seller tools stay out of the way until Seller Mode is on.
- Every report number that was checked by hand matched: Sales Reports, Schedule C summary, 1099-K check, tax records, show profit.
- Whatnot live is its own show kind: it picks Whatnot and fills the fee estimate for you. Selling part of a lot, "Set asking price for all", the printable price list, the break-even line on the show page.
- The heir's Insurance Report: estate name, totals, list of every coin, "not an appraisal" note.

Combined ranked wish list (all six reviews)

#	Wish	From
1	**One order, several coins:** pick several Business coins, one buyer, one shipping charge, one order and tracking number, one Whatnot 30¢ fee, and an optional buyer receipt.	5, 6
2	**Refund / cancel / return that keeps the record** (fee and shipping already spent) instead of deleting the sale.	5, 6
3	**One clear set of sales and profit numbers** on Home, the show page, Sales Reports and the tax CSV (or label each one).	3, 6
4	**Fill the Red Book gaps** (lists in reviews 5 and 6) and keep saying "No Red Book value" until then. Needs your book.	1, 2, 3, 5, 6
5	**Bulk asking price** that follows the per-coin rule (never below cost + 10%), usable from Select on any Business coins, not just a case.	3, 5
6	**Stream and supply costs by kind** (equipment, supplies, subscriptions) that feed a Supplies line on the Schedule C summary.	6
7	**CSV columns:** buyer, order, tracking and Show on the sales CSV; Show and Business/Personal on the coins CSV.	5, 6
8	**Heir tools:** junk silver by face value (90%, 40%, 35%); "I'd like to sell this one eventually" on an inherited coin; "Value when inherited"; Source outside the folded section.	2, 4
9	**Date acquired** asked on Add coin when Seller Mode is on, or defaulting to today, so tax records always have purchase dates.	5
10	**Shipping:** a usual "Shipping you charged", shipping you paid by package, and a "Paid for the whole lot" choice when Quantity is above 1.	6
11	**Keep Business apart from Personal** on My Stacks, Coin Value and Home counts; make "need info" counts match their lists.	4, 5, 6
12	Cardboard or "pile" box with numbered spots off by default; a "can't grade these" choice for common cents.	4
13	Do not carry "Paid with" over between sales unless it is the same show; Edit sale refills eBay fees.	5
14	A to-ship list with a packing list by buyer; a stream run sheet with sell-through; payout match-up; buyer list.	6
15	Buying at a show tied to that show; trades; holds/layaway; consignment; mileage rate; stock age; price tags.	5
16	Small wording fixes: old "later" text in Options → Seller Mode, "Do not sell" next to Mark as sold, a sold coin still showing its box slot, "Check eBay sold" on Whatnot sales.	4, 5, 6

Review 1: The first-time collector (v0.4x) ★★★★☆

> "Adding a coin by typing its name is quick. Then I hit a wall: my silver Walking Liberty half showed $0.50 and Home said Melt value $0.00. I almost thought the app was broken. Four stars because the basics are great once you know where things are."

Ran: 10 US coins added, then every menu page, Options, New album and Hide values.

Useful: ~7 taps per coin; metal and ounces fill themselves; IDs, mintage, suggested price, eBay sold link; empty pages say what to do.

Confusing: silver looked worthless without a price; only 3 of 10 coins got a Red Book value; "enter metal prices" opened Options with Spot prices still folded; no "Add another"; newcomer words; locked photo box; New album form put a long list before brand and number.

Wished for (all built): metal price prompt, Add another, "No Red Book value" message, unfolded Spot prices, plain-words help, hide or shrink the photo box, album form order.

Review 2: The heir (v0.4x) ★★★☆☆

> "I inherited my uncle's coins and wanted a list for the insurance company. The app understood right away that these were inherited. But my report said the whole box was worth $121, when my silver coins are worth far more, and nothing told me to enter a silver price."

Useful: "Inherited · do not sell" labels; the Insurance Report with estate name, totals, coin list and a "not an appraisal" note.

Confusing: report total too low until a silver price was typed; 2 of 10 coins had a Red Book value; "Paid $0.00" for inherited coins and nowhere to record value when inherited; no way to mark an inherited coin For sale; Source hidden inside Purchase details; words like Raw, Do not sell, Holder.

Wished for: honest low-total warning (built), Value when inherited (built, v0.42), mark inherited coins to sell, ask "Did you inherit these?" at the top.

Review 3: The coin-show seller (v0.4x) ★★★★☆

> Real bug found: a coin's ID changed the first time the app was reopened (MD-001 became MD-002). Fixed since.

Useful: 4-tap sale at a show; Shows and Sales Reports; Home sold results.

Confusing: changing coin ID; 3 of 5 coins had no suggested price; two different profit numbers; sale date defaulted to today, not the show; fees, tax and payment hidden under More details; dealer case demanded rows and slots; no bulk pricing; no printable price list.

Wished for (all built in v0.40): ID fix, "Set asking price for all", price list, show dates and fees up front, case defaults, break-even line.

Review 4: The heir, re-run on v0.52.0 ★★★★☆

Useful: inherited flow and Insurance Report are much smoother; Value when inherited and the Needs info list exist.

Confusing (8): junk silver has no home (entered as "Other silver item" with guessed ounces); a new cardboard box demands row and slot numbers; Home says "25 coins need info" but the list opens with 23; "Missing: grade" on every common cent so the "totals may be off" banner never clears; report order looks random and lacks CAC and who/when inherited; Home still shows "Cost $0.00 / Gain" for an all-inherited collection; "Do not sell" next to a "Mark as sold" button; single-coin Delete has no "are you sure?".

Wished for (7): junk silver by face value; numbered spots off by default for a cardboard box; sort the report and show CAC and inheritance; "can't grade these"; matching counts; hide Cost/Gain when all inherited; a plain "sell this one eventually".

Review 5: The coin-show seller, re-run on v0.52.0 ★★★★☆

> "Big step up from my last try. The show I was at was already picked when I sold, and the year-end page has a Schedule C summary and a 1099-K check. Four stars: half my stock has no Red Book price, the 'price everything' button put one coin below what I paid, and my tax file has no purchase dates."

Ran: 26 items, a dealer case, a 3-day show with $470 costs, 11 sales (20 items), reports, both CSVs, tax records, a reload.

Useful: IDs stay put; Set asking price for all; price list and Share as text; sold form picks the running show; selling part of a lot; eBay fees fill themselves; Return unsold coins; all report math right.

Confusing (11): bulk price can go below cost; many coins have no Red Book value; tax records had no purchase dates (Date acquired is folded away); "Paid with" carried over from the last sale; Edit sale doesn't refill eBay fees; the Home stack chip quietly drops it from totals; Business and personal mixed on My Stacks and Coin Value; coins CSV has no Business column; a sold coin still shows a box slot; old "later" wording; show page sales not in date order.

Missing business features (10): sell several coins to one buyer; bulk price or For sale outside a case; buyer receipt; refunds; buying at the show; trades; price tags; holds and consignment; mileage rate; stock age.

Review 6: The Whatnot live-stream seller, v0.52.0 ★★★★☆

> "Finally an app that knows what a Whatnot live is. The fee, shipping, buyer, order number and tracking were all in one form, and the report matched my hand math to the cent. Four stars: two coins to one buyer charge the 30¢ twice, there's no way to record a refund without erasing the sale, and my stream costs had to go in one 'Other' box."

Ran: 27 Business items (18 raw coins, 4 slabs, junk quarters, a round, a bar, a roll, a proof set), one "Whatnot live" show, 10 sales (14 items), Home, show page, Sales Reports, CSVs, tax records, 11th sale with saved shipping, a refund test.

Checked by hand: sales $670.00, shipping charged $40.00, cost $477.50, fees $50.40, shipping paid $41.67, show costs $97.00, profit **$43.43**. All matched.

Confusing (11): same-buyer order charged the 30¢ twice; four different profit/sales numbers (Home $140.43, show page sales $710, report sales $670, tax gain $142.10); show page "Sold here" prices include shipping unlabelled; show costs built for coin shows (Table, Gas, Hotel); "Move back to collection" erases a refunded sale and its fees; "Paid each" with a quantity cost the junk quarters $490; sales CSV has no buyer/order/tracking and neither CSV has Business or Show; "Shipping you charged" has no usual value; Home looks empty for a Business-only seller; many Red Book gaps (e.g. 1938-D NGC Walker paid $95, valued $11.39); stale "later" text.

Missing business features (11): one order with several coins; stream costs by kind; to-ship list; refund that keeps the record; stream run sheet with sell-through; usual shipping charged and tiers; payout match-up; buyer list; giveaways and free items; auction vs buy-it-now flag; price tags.

Not tested in any run: printing to paper or PDF, photos, real touch feel, live prices, backup and restore, offline use, hundreds of coins, the real Whatnot app.
